

Disaster Resilient Cities: Forecasting Local Level Climate Extremes and Physical Hazards for Kuala Lumpur

An Introduction to Flash Flood Modelling in Malaysia

Dr Iain Willis & Helen Smith

DEFINING FLASH FLOOD

Flash =

- Pluvial Origin
- Aka 'Surface Water'
- Not fluvial **but** can be within a flood plain

Legend

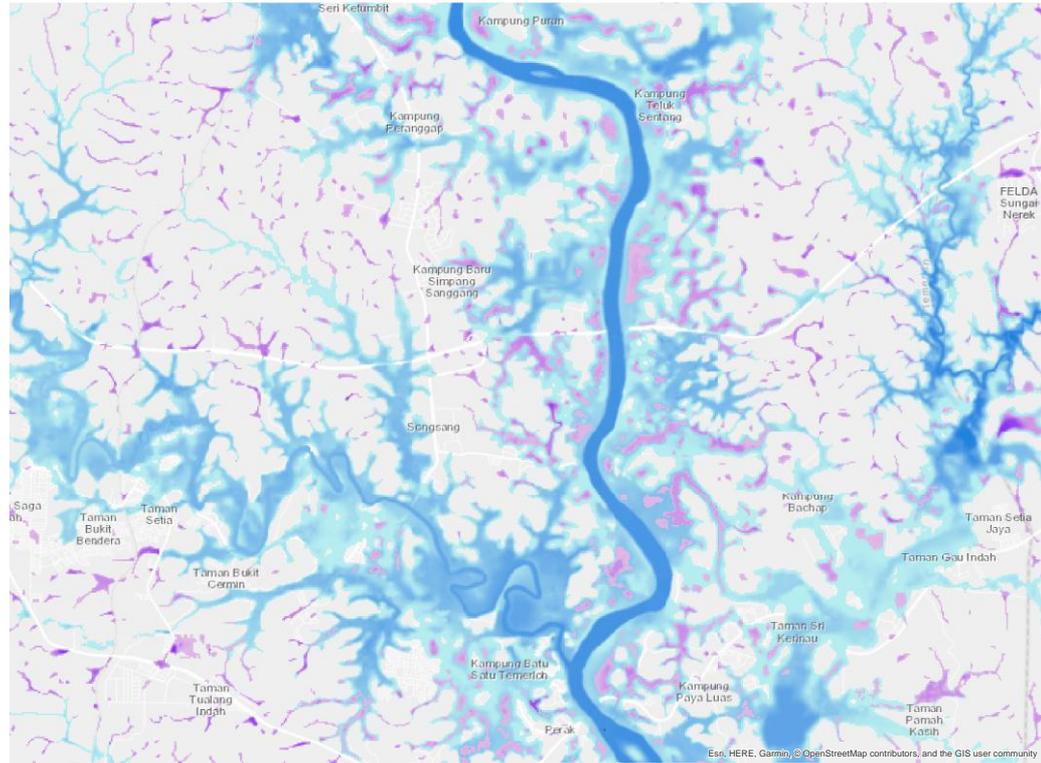

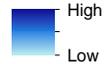

MY_FLSW_UD_Q100_RD

Value

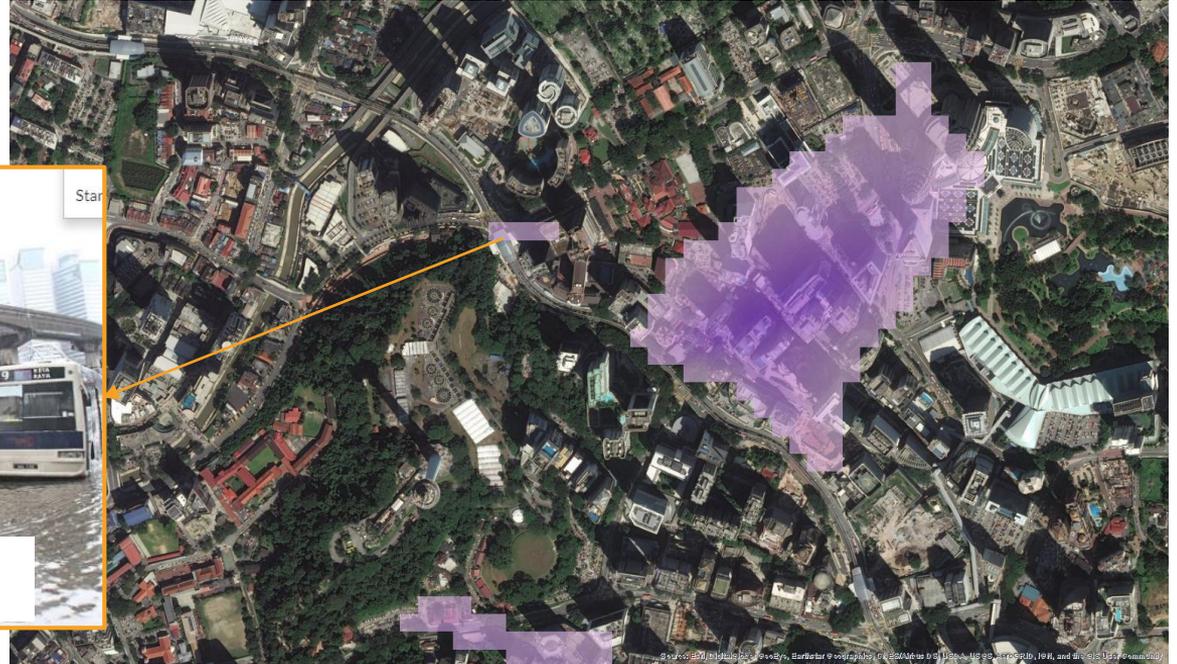

MY_FLRF_UD_Q100_RD

Value

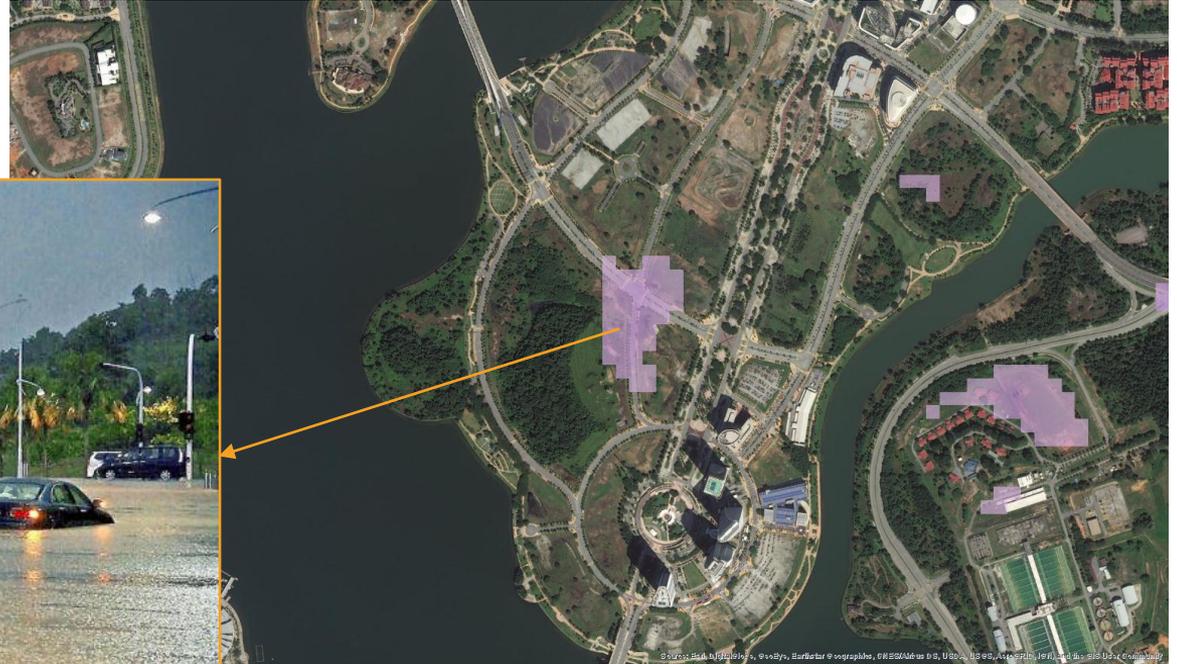

Simpong Sanggang, Malaysia

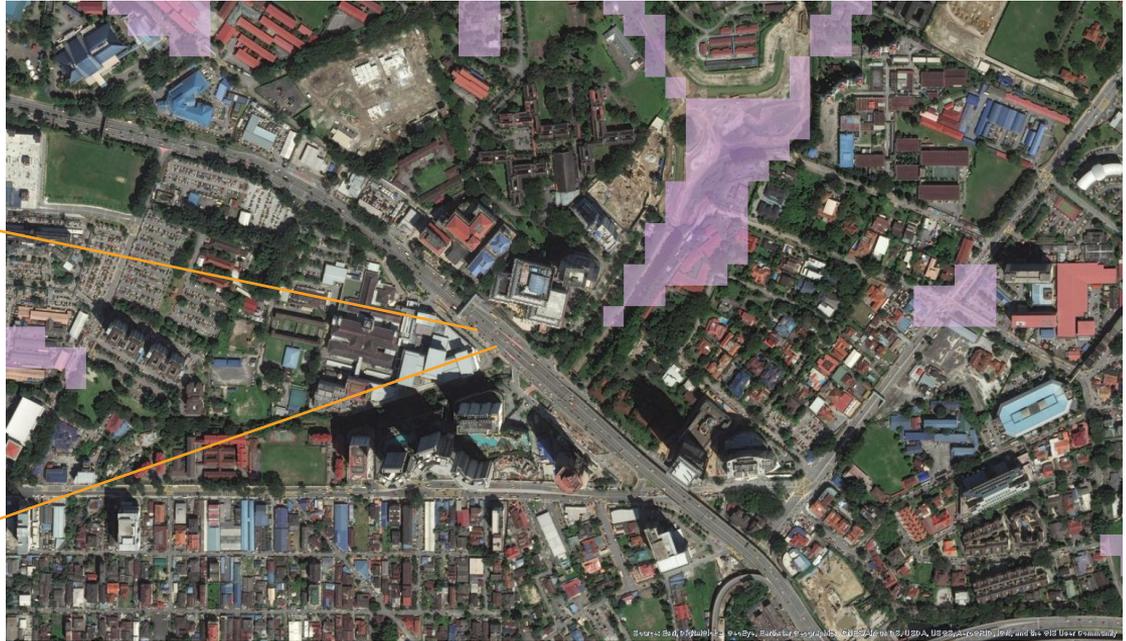

KL FLOOD VALIDATION (2014)

KL FLOOD VALIDATION (2016)

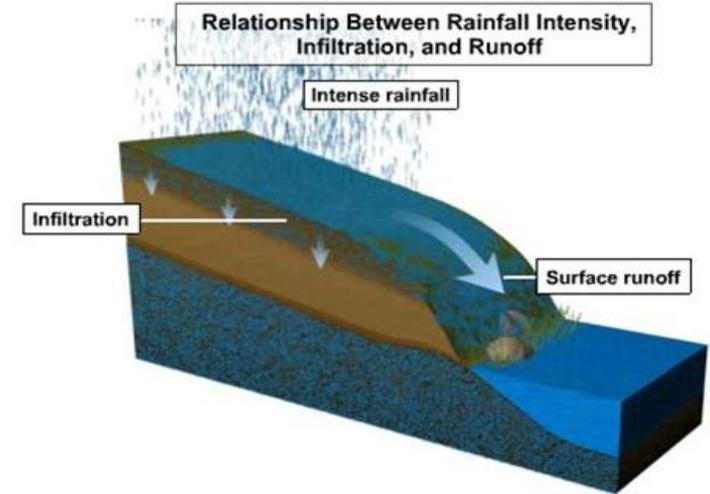

KL FLOOD VALIDATION (2011, 2017)

FACTORS IN FLASH FLOOD MODELLING

- Hydrology
 - Inputs
 - Rainfall Data
 - Gridded
 - Hourly
 - Duration
 - Historical period of Data
 - Storm durations (1hr, 3h, 24hr)
 - Probabilistic Analysis
 - Rainfall-Runoff model

FACTORS IN FLASH FLOOD MODELLING

- Hydraulic Modelling
 - Inputs
 - DTM – Digital Terrain Model (not DSM)
 - Process – 2D hydraulic modelling (JFLOW)
 - Urban Drainage / Defences

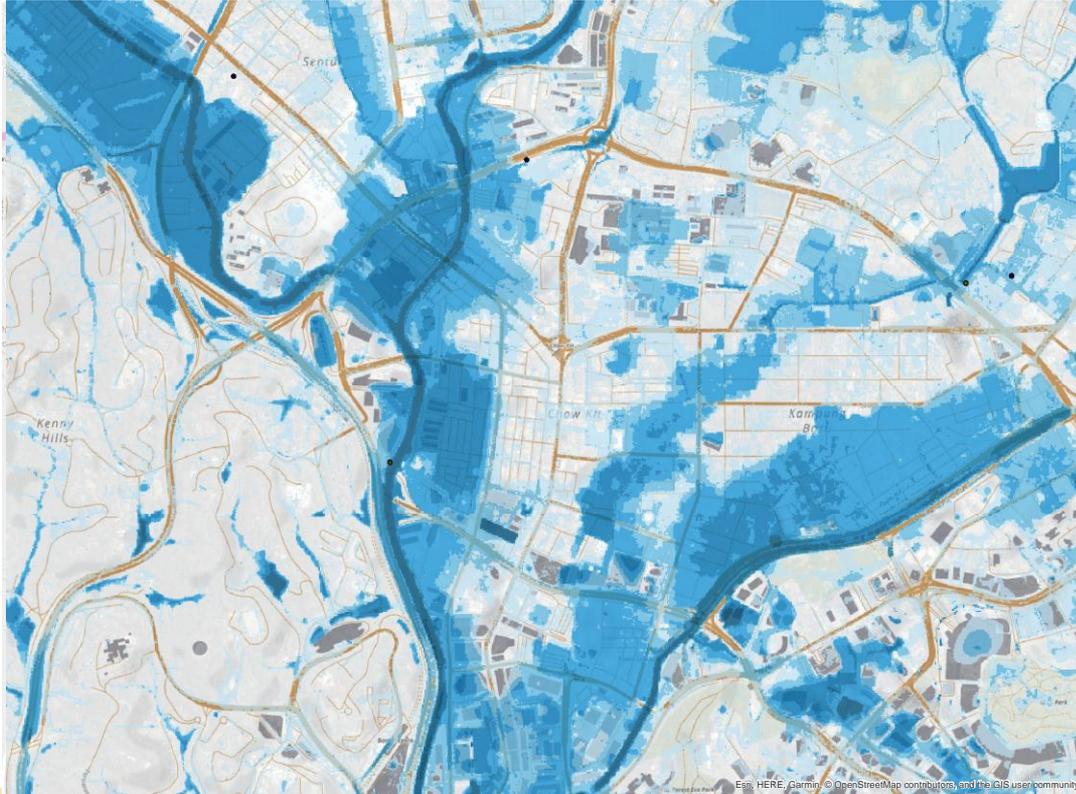

30m

5m

EARLY TESTING – KUALA LUMPUR

JBA PRIORITIES: KL FLASH FLOOD MAPS

- Hydrology
- Sensitivity Testing
 - Storm Duration
 - DTM resolution (2m, 5m, 10m)
 - DTM boundary
 - Defence Assumptions
 - Drainage Effectiveness
 - Levees
- Validation

DRR CONSIDERATIONS: FLOOD MAPS

- ***Non-structural investments have the greatest cost-benefit (Kelman 2014)***
 - Flood maps
 - Future land use / Planning
 - Forecasting & Emergency Response
 - JBA Flood Foresight
 - Predicts flood severity in days advance
 - Mitigate / Plan / Respond

Features

Data are available via web-app, API, download or email for integration into your workflow.

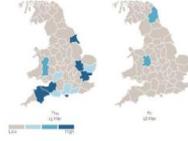

Rainfall screening

Global rainfall data: consistent precipitation data and return periods up to seven days in advance

Flood Monitoring and Forecasting

Forecast and real-time flood extent and depth data: trans-national riverine flood footprints and alerts up to 10 days in advance

Impact analysis

Forecast impact mapping: identify potentially affected assets and generate loss forecasts before and during flood events

Effective flood management begins with Foresight

Flood Foresight is a globally-scalable operational system providing data on rainfall severity, flood inundation
